Projects

Eye Care Management System | DBMS Mini Project

This project is a DBMS mini project. It aims to maintain information about patients and doctors in an eye clinic. Eye Care Management System, as described above, can lead to error-free, secure, reliable and fast management system.

Hospital Information System | FILE STRUCTURE Mini Project

This project is a File Structure mini-project. It includes registration of patients, storing their details into the system. Our   software has the facility to give a unique id for every patient and stores the details of every patient and the staff automatically.

Online Music System | WEB TECHNOLOGY Mini Project

The aim of "Online Music System" is to provide online music portal with user friendly interface. This is one of the online shopping for music files. Users can search songs easily and they can play them and user should register if they want to download any music.

IOT Based Agriculture Field Monitoring System | Major Project

Smart Agriculture reduces wastage of water, fertilizers and increases the crop yield. Here a system is proposed to monitor crop-field using sensors for soil moisture, humidity and temperature. By monitoring these parameters, the irrigation system can be automated if soil moisture is low.
